研究经历

DeepRead: 文档结构感知的 Agentic Search[†] 第一作者 2025.10 - 2026.2
提出 **DeepRead** 结构感知文档推理 Agent, 利用 OCR 保持版面结构保真, 构建段落级坐标, 并设计 **Retrieve** 与 **ReadSection** 工具, 在我们的环境设置下涌现了 “locate-then-read” 类人阅读行为; 在四个多类型文档基准上较 **Search-o1** 基线平均提升 **10.3%**。
▷ **arXiv Preprint**, 预印本被知名媒体**新智元**报道

RESEARCH EXPERIENCE

DeepRead: Document Structure-Aware Reasoning to Enhance Agentic Search[†] *First Author*
October 2025 – February 2026

Proposed **DeepRead**, a structure-aware document reasoning agent that preserves layout fidelity via OCR, constructs **paragraph-level coordinates**, and equips LLMs with **Retrieve** and **ReadSection** tools. Unlike flat chunk-based agentic search, DeepRead explicitly models document hierarchy and reading order, allowing the agent to first locate relevant regions and then inspect complete local context. Under our environment setting, this gives rise to human-like “locate-then-read” reading behavior and improves over **Search-o1** style baselines by an average of **10.3%** across four multi-type document benchmarks.

MuDABench: Multi-Document Analytical QA Benchmark and Multi-Agent Framework[†] *First Author*

April 2025 – December 2025

Constructed **MuDABench**, a multi-document analytical QA benchmark with **80k+ pages**, **332 questions**, and **4,964 structured intermediate facts**, to evaluate multi-document retrieval, cross-document aggregation, and numerical reasoning over large document collections. The benchmark uses structured intermediate facts to expose where a system fails: document selection, single-document extraction, cross-document aggregation, or final numerical reasoning. Designed a **Multi-Agent** workflow that substantially improves over standard retrieval baselines.

SHAP-Based Causal Inference Framework for Corporate Finance^{*} *Project Leader* *September 2024 – January 2025*

Built an interpretable machine learning framework combining manually coded panel data and **Optuna** hyperparameter optimization, achieving $R^2 = 0.76$ on corporate total factor productivity prediction. Further

used **SHAP** to quantify the **nonlinear marginal contribution** of ESG rating disagreement to outcome variables and reveal potential causal pathways linking heterogeneous ESG signals with productivity outcomes.
▷ **Published in** *Finance Research Letters* (CAS Q1 Top, JCR Q1, IF: 6.9); received the Outstanding Paper Award at the Tsinghua Causal Inference Seminar.
